DO YOU KNOW THE DIFFERENCE BETWEEN A SAWFISH (PRISTIDAE) AND A SAW SHARK (PRISTIOPHORIFORMES)?

I'M A SAW SHARK. I ONLY GROW UP TO ABOUT 1.5M IN LENGTH. I ONLY LIVE IN THE OCEAN. I'M A SAWFISH. I CAN REACH UP TO 7M IN LENGTH WHEN I'M AN ADULT! I LIVE IN THE OCEAN, BUT BABY SAWFISH LIVE IN MANGROVES AND SOMETIMES EVEN IN RIVERS (FRESHWATER).

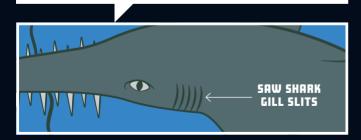

MY SAW IS
SHAPED LIKE A
LONG TRIANGLE
WITH A POINTED
TIP. I HAVE ONE
BARBEL ON EACH
SIDE OF MY
SAW — IT LOOKS
LIKE I HAVE A
MOUSTACHE!

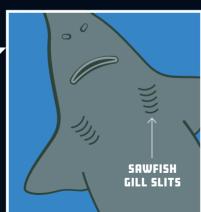

MY SAW HAS FEWER TEETH, BUT THEY ARE WIDER, STRONGER TEETH. MY SAW HAS A ROUNDED BLUNT TIP.

I'M RELATED TO OTHER SHARKS LIKE WHITE SHARKS AND TIGER SHARKS, SO MY GILL SLITS ARE ON THE SIDES OF MY BODY, BEHIND MY EYES.

I MAY LOOK
LIKE A SHARK
BUT I'M MORE
CLOSELY
RELATED TO
RAYS. THAT'S
WHY MY GILL
SLITS ARE ON
MY VENTRAL
SURFACE,
NEAR MY
MOUTH.

IF YOU ARE RECORDING SAWFISH OR SAW SHARKS IN FISHERIES CATCHES, BE SURE TO LOOK CAREFULLY AND RECORD THE RIGHT ONE. SAWFISH ARE VERY RARE AND ENDANGERED, SO WE NEED TO COLLECT AS MUCH INFORMATION ABOUT THEM AS WE CAN!
